SUMMARY	<ul style="list-style-type: none">• Over 6 years of experience in NLP, from parsing and dialogue system to distributional and formal semantics• Informed by linguistic and computational knowledge, conscious of opportunities and limitations of both sides• Demonstrated abilities in publishing papers in top conferences as well as developing practical applications
EDUCATION	<p>Ph.D. (Research Area: Computational Linguistics) Aug 2019–Jan 2024 The Chinese University of Hong Kong (CUHK) Thesis: <i>Learning Semantics from Meaning Representations: From Distributional and Graph-Grammatical Perspectives</i></p> <p>B.Sc. (Hons) with First Class Honors in Computer Science Sept 2015–July 2019 The Chinese University of Hong Kong</p> <ul style="list-style-type: none">• Dean's List: Awarded for academic excellence in the Faculty of Engineering 2016, 2017, 2018, 2019• Master's List: Awarded to the top student of each major of each class in Wu Yee Sun College 2017, 2018, 2019• ELITE Stream Student Scholarship: To recognize excellence in advanced-level ELITE courses 2017, 2019• Computer Science Scholarship: Awarded to top students admitted to the computer science program 2016
RESEARCH	<p>Word to Function: Functional Distributional Semantics (FDS) 2021–2023</p> <ul style="list-style-type: none">• Enhanced linguistic preciseness and computational efficiency of FDS for complex sentence structures• Developed a variational autoencoder from scratch using PyTorch sped up with distributed data parallelism• Outperformed >20 models on semantic tasks, including BERT that uses 12× more data and 2× more parameters• Revealed that FDS captures hypernymy if trained on a corpus that follows the Distributional Inclusion Hypothesis (DIH) and proposed an alternative training objective that improves hypernymy detection from corpora^[5]• Published a paper at <i>*SEM 2023</i>^[4], and was invited to present at the 19th DELPH-IN Summit <p>Text Generation via Semantic Graph Parsing 2019–2021</p> <ul style="list-style-type: none">• Demonstrated the use of a synchronous graph grammar in approximating the syntax–semantics interface of English• Developed a probabilistic graph parser from scratch that reconstructs syntactic derivations from semantic graphs, with devised adaptations that improve accuracy, efficiency, and coverage of graph parsing• Achieved better graph-to-text translation than a neural sequence-to-sequence method under out-of-domain settings while provided syntactic disambiguation and more interpretable surface realization• Published in <i>ACL 2023</i>^[3], and was invited to present at the Foundations of Language Processing of Umeå University
PROJECTS	<p>Cantonese Language Modelling 2024</p> <ul style="list-style-type: none">• Pretrained a BART model for Cantonese using Huggingface on TPUs sponsored by the TPU Research Cloud (TRC) program of Google• Planned to further develop an English-to-Cantonese machine translation system using the pretrained model <p>Task-Oriented Dialogue System with Unstructured Knowledge Access 2021</p> <ul style="list-style-type: none">• Collaboratively developed a dialogue system with the CUHK team that performs retrieval-augmented generation (RAG) of natural language response based on dialogue contexts^[2]• Coordinated a sub-team that works on ranked retrieval from knowledge base using Huggingface and PyTorch• Participated in the Ninth Dialog System Technology Challenge (DSTC9) and our team ranked 12 out of 24 <p>CV–JD Recommendation System 2019</p> <ul style="list-style-type: none">• Researched on automatic taxonomy induction using distributional and pattern-based approaches• Wrote a web crawler to scrape over 40,000 publicly available CVs and 20,000 job descriptions (JDs)• Devised a CV–JD matching algorithm using doc2vec and Latent Dirichlet Allocation (LDA)
INVITED TALKS	<p><i>Functional Distributional Semantics (FDS) at Scale and Probing Hypernymy in FDS</i>, 19th DELPH-IN Summit, Language and Information Society of University of A Coruña 27 June 2023</p> <p><i>Semantic Composition with PSHRG for Derivation Tree Reconstruction from Graph-Based Meaning Representations</i>, Seminar at Foundations of Language Processing of Umeå University, Virtual 16 Sept 2022</p>

WORK EXPERIENCE	Junior Research Assistant July 2019 Department of Systems Engineering and Engineering Management, CUHK <ul style="list-style-type: none"> Conducted collaborative research on cross-framework meaning representations (MRs) parsing Developed a transition-based text-to-MRs parser Published a paper in CoNLL 2019 Shared Task^[1]
	Software Engineer Intern June 2018–Aug 2018 Set Sail Software <ul style="list-style-type: none"> Collaborated with digital marketing agencies in developing chatbots for multiple clients tailored to their needs Developed backends of chatbots using Node.js and Firebase Cloud Functions Created tools for automating performance analyses of chatbots
ADDITIONAL EXPERIENCE	Teaching Assistant, Faculty of Engineering, CUHK <ul style="list-style-type: none"> CSCI2100: Data Structures 2020–2023 SEEM3550: Fundamentals in Information Systems 2021–2023 Resident Tutor, Wen Lin Tang, Chung Chi College, CUHK 2021–2023 <ul style="list-style-type: none"> Provided pastoral care to undergraduate residents and served as an intermediary between them and the warden
CORE SKILLS	Natural Languages Cantonese (<i>native</i>), English (<i>proficient</i>), Mandarin (<i>proficient</i>) Programming Languages Python, C, SQL ML Libraries PyTorch, Tensorflow, scikit-learn NLP Libraries PyDelphin, NLTK, Spacy, Gensim, WordNet, Hugging Face Cloud Platform Google Cloud
